

Based on international advanced design concept, upgrade the structure, adapt to the needs of various users.

Adopt international advanced production facilities—laser cutting machines, automatic welding robots, CNC facilities etc, to achieve top standard tooling operations. Combine chemical treatment process and electrostatic spraying process, ensure perfect appearance.

Main tube thickness: 3mm, combine oval tube thickness: 50*100mm

Premium imported material, the introduction of advanced weight bearing analysis and ultimate strength test equipment to ensure the stability and safety of equipment.

The surface treatment adopts thermosetting powder static spraying, high hardness, strong adhesion and corrosion resistance.

Specifications

DIM: (L)1800*(W)880*(H)560mm

N. W. : 62KG
